

GranRecipes User Manual

Introduction

GranRecipes is a user-friendly application designed to help you find recipes based on ingredients you have at home. This manual guides you through using the application.

Starting the Application

Open the GranRecipes application by running the Python script.

The main window will display options to choose proteins, veggies, find a recipe, and exit the application.

Selecting Ingredients

Click on the "Protein" button to open the protein selection window.

Choose your available proteins and click "Save". The window will close upon saving.

Repeat the process with the "Veggies" button for vegetables.

Finding a Recipe

Once you have selected your ingredients, click on "Find Recipe".

If a recipe matches your ingredients, it will be displayed in a new window.

If no matching recipe is found, a message will inform you.

Viewing Images

Images related to the selections are displayed in the main and ingredient selection windows for a more engaging experience.

Exiting the Application

Click on the "Exit" button in the main window to close the application.

Troubleshooting

Ensure all necessary image files are in the correct directory.

If no recipes are found, try selecting a different combination of ingredients (typically a protein and all the veggies, due to having a limited recipe database)
